

December 12, 2011

Dear VisualDOC User,

On behalf of Vanderplaats Research & Development, I am pleased to announce the release of VisualDOC 7.0.

The VisualDOC graphical interface along with its database has been redesigned from scratch. Visualscript has been completely integrated into VisualDOC so the user will no longer need to use Visualscript as a separate program.

Version 7.0 is a major release that will allow its users to create more advanced flowcharts with more controls and more options than ever before. This new version will also allow users to solve more complex problems. Users of this new version will be able to monitor almost any quantity used in their simulations and/or optimization problems.

Other features have also been added or improved in VisualDOC 7.0. For a complete list of new features and/or current limitations, please see the "*VisualDOC List of New Features*" document.

The electronic versions of the VisualDOC manuals have been updated to reflect all new functionality.

VisualDOC 7.0 is included on the accompanying media. A Java Runtime Environment (JRE) is required for VisualDOC. To install this product, please refer to the "*VisualDOC Installation Guide*" document.

As long as your lease/maintenance agreement is up to date, VisualDOC 7.0 should work with your current license file.

We hope that you find the new features added to this release useful and that you can benefit from this new release. For more information on VisualDOC or other VR&D products, please do not hesitate to contact us or check our web site.

Sincerely,

Juan Pablo Leiva
President/COO
